

WILLIAM WOJCIK

Senior IT & Cybersecurity Professional | 15+ Years of Full-Spectrum IT Ownership

Wojcikwilliam.it@gmail.com • [linkedin.com/in/wwjck](https://www.linkedin.com/in/wwjck) • github.com/wumwumwum • Joliet, IL • Open to Remote

PROFESSIONAL SUMMARY

Results-driven IT and cybersecurity professional with 15+ years as a sole IT owner in a multi-client SMB environment. Built and operated a full security program from scratch — including IAM, endpoint security, phishing awareness, incident response, compliance, and audit management — with no team and a constrained budget. Identified and investigated a real data exfiltration case, providing expert witness testimony in court proceedings. Designed AI-powered and automated reporting workflows deployed in production. Active home lab operator running a multi-node Proxmox environment with Wazuh and Splunk SIEMs, Pi-hole DNS filtering, Tailscale mesh VPN, and hands-on offensive security work including vulnerability assessments, credential harvesting labs, and keylogger detection testing. Proven ability to communicate complex technical concepts clearly to C-suite, legal counsel, and non-technical stakeholders. Currently pursuing Cisco CCST Cybersecurity.

CORE COMPETENCIES

- ▶ Identity & Access Management (IAM)
- ▶ Endpoint Detection & Response (EDR)
- ▶ Phishing Simulation & Security Awareness
- ▶ Security Policy & Procedure Authorship
- ▶ Quarterly Access Reviews & Least-Privilege
- ▶ SIEM Administration (Wazuh, Splunk)
- ▶ Vulnerability Assessment (Nmap, OpenVAS, Metasploit)
- ▶ DNS Security & Filtering (Pi-hole, DMARC/DKIM/SPF)
- ▶ Google Workspace Administration (12+ years)
- ▶ Active Directory & Windows Server 2022
- ▶ Proxmox VE Hypervisor Administration
- ▶ Linux Administration (Ubuntu, Debian, Kali, Parrot, Arch)
- ▶ Tailscale Mesh VPN Deployment & Administration
- ▶ SSH Hardening & Key-Based Authentication
- ▶ PostgreSQL / SQLite / MySQL / MariaDB / MongoDB
- ▶ Power BI Reporting & Dashboards
- ▶ Python, PowerShell, Bash, Batch Scripting
- ▶ SFTP Pipeline Design & Automation
- ▶ Data Quality & Cleanup (Excel, Soda)
- ▶ SaaS Platform Administration (15+ platforms)
- ▶ Executive & C-Suite Communication
- ▶ Project Management (Buildouts, Migrations, Rollouts)
- ▶ Security Auditing & Compliance (SOC 2, HIPAA)
- ▶ Incident Detection, Investigation & Response
- ▶ Data Exfiltration Detection & Legal Documentation
- ▶ Privileged Access & Credential Management
- ▶ MFA Deployment & Policy Enforcement
- ▶ Log Aggregation & Security Event Monitoring
- ▶ Penetration Testing (Kali, MSFConsole, SET)
- ▶ Firewall & Network Segmentation (SonicWall, UFW, VLANs)
- ▶ Okta User Access & Tier 1 Identity Support
- ▶ Azure AD / Microsoft Entra (Working Knowledge)
- ▶ Docker & Container Management (Portainer)
- ▶ Windows Server Roles, GPO & Defender Hardening
- ▶ Network Infrastructure & Office Buildouts
- ▶ Disaster Recovery Planning & Execution
- ▶ Crystal Reports Development
- ▶ Google Apps Script & Workspace Automation
- ▶ HTML, CSS, JavaScript, Java
- ▶ AI-Powered Workflow Development (Google Gemini, Ollama)
- ▶ OSINT Methodologies & Practice
- ▶ IT Budget Ownership & Vendor Management
- ▶ Cross-Functional Training Program Design
- ▶ Technical Writing & Public Documentation

PROFESSIONAL EXPERIENCE

Senior Cybersecurity & Systems Administrator | *Veritas Administrators, LLC — Remote* Aug 2022 – Present

- Own and administer the full Google Workspace environment (12+ years total): OU structure, role-based access, per-OU security policies, device activity monitoring, Meet/Chat/Drive policy configuration, and automated log aggregation via Apps Script.
- Engineered a no-cost Google Takeout eDiscovery alternative — capturing account snapshots at deprovisioning and migrating data to departmental accounts — meeting legal hold requirements without Google Vault.

- Conducted multi-client annual security audits across client-hosted portals covering least privilege, access controls, log review practices, policy compliance, and monitoring procedures — up to 80+ questions per audit, across SOC 2 and HIPAA frameworks.
- Identified, investigated, and documented a data exfiltration case involving a departing executive; catalogued all evidence, presented findings to C-suite and legal counsel, and served as expert witness in court proceedings — testifying on digital forensics, exfiltration methodology, data classification, and company security posture.
- Led EDR operations using Google Workspace endpoint tools and Windows Defender: configuration, alert monitoring, malware quarantine, and compromised credential response.
- Built and operated a Security Awareness Program from scratch: designed and deployed simulated phishing campaigns, created tiered training for staff/management/C-suite, and served as client-facing security communications point of contact — measurably reducing phishing incidents by 10%+.
- Generated and presented security metrics dashboards and briefings to executive leadership, translating threat data, audit findings, and EDR health into non-technical, business-relevant reporting.
- Automated Windows event log collection via scripting and mapped output to Google Drive for centralized review; used Python-based keyword scanning on event logs for security indicator identification.
- Performed real-time monitoring of Google Workspace security alerts, responding to unauthorized access attempts by resetting credentials and restricting account access.
- Maintained full library of security policies, SOPs, incident response playbooks (with live testing), data handling policies, and knowledge base articles — all created independently and approved by management.
- Managed privileged access documentation, sole superadmin credentials, credential rotation policies, and organization-wide password management (LastPass, KeePass, Bitwarden).
- Reviewed vendor SOC 2 penetration test reports; coordinated with providers to address identified weaknesses and validate remediation.

Systems & IT Administrator | *Veritas Administrators, LLC*

Aug 2019 – Aug 2022

- Created and owned a formal quarterly access review process — including admin rights audits and C-suite stakeholder interviews — approved by management; managed all account provisioning and deprovisioning.
- Managed client-provisioned Okta access: user access requests, MFA setup, authentication troubleshooting, and identity incident coordination with client admins.
- Configured SPF, DKIM, and DMARC records; implemented SpamTitan email security gateway; managed full email security stack via GoDaddy DNS.
- Built and maintained a PostgreSQL/SFTP data solution; supported data team with dataset preparation and query logic; delivered client data packages from raw TXT exports to fully designed custom Crystal Reports templates.
- Built an AI-powered reporting workflow using Google Gemini and Google Sheets: auto-generated multi-page narrative insurance reports from structured adjuster data, deployed in production and substantially reducing staff reporting time.
- Deployed MFA across Google Workspace and multiple SaaS platforms; owned user enrollment, authenticator app configuration, and policy enforcement (~95% direct ownership).
- Developed a phishing threat-mitigation program that measurably reduced phishing incidents by 10%+.
- Managed IT budget (~\$36K annually): built, defended, and negotiated the budget; managed all vendor contracts, renewals, and purchasing across 15+ platforms including Dell hardware procurement.
- Administered Google Workspace, HubSpot, ClickUp, Nextiva, Freshdesk, and additional SaaS platforms: provisioning, access controls, workflow automation, and integrations.

Project Coordinator – IT | *Veritas Administrators, LLC*

Aug 2015 – Aug 2019

- Led three office buildouts: full network design, cable installation and testing, SonicWall firewall configuration, switch setup, Windows Server deployment, and workstation standup for 20+ users.
- Executed company-wide Nextiva VoIP rollout — call flows, IVR, ring groups, extensions, call recording — eliminating physical hardware dependency; owned the platform for 7+ years.
- Designed and maintained a multi-client automated reporting pipeline: field mapping across systems, SaaS developer collaboration, daily SFTP-delivered reports iterated over 2+ years.
- Managed SaaS platform migrations end-to-end: field mapping, data export and transformation, developer collaboration, and minimal-downtime cutover.
- Produced formal project documentation: memos, timelines, progress reports, obstacle forecasting, and stakeholder updates for C-suite and management.
- Built and maintained an Ubuntu-based network monitoring workstation for real-time device and bandwidth visibility.

Administrative Assistant / Internal IT Support | *Veritas Administrators, LLC*

Aug 2011 – Aug 2015

- Provided first-line IT support for staff and executive leadership — resolving hardware, software, and connectivity issues as the organization's sole IT resource from day one.

- Managed daily support requests, internal ticketing, and IT administration tasks independently with a high degree of autonomy.

Freelance IT Consultant | *Self-Employed — Remote*

Jan 2015 – Present

- Deliver Google Workspace administration, security hardening, SaaS configuration, and IT support to SMB clients.
- Integrated IT and data systems for a HIPAA-compliant family practice clinic, aligning workflows with hospital infrastructure requirements.

HOME LAB & PORTFOLIO PROJECTS

Active multi-node home lab built for hands-on security practice and portfolio development. Infrastructure runs on a 3-node Proxmox VE environment (2 desktop PCs & a laptop) hosting 12+ containers and VMs. Project documents and notes are published to GitHub (github.com/wumwumwum).

Infrastructure & Platforms:

- Proxmox VE 9.2 hypervisor cluster (3 nodes): VLAN configuration, Linux bridge networking, SSH hardening, Samba file sharing, and non-root administration across all nodes.
- Ubuntu Server (x2), Windows Server 2022 VM, Debian LXC containers, Kali Linux VM — each hardened at install with UFW, SSH key auth, and non-root user creation.
- Pi-hole DNS sinkhole with DHCP handoff from Nighthawk router, custom blocklists, Tailscale integration, and DNS leak testing via dnsleaktest.com.
- Tailscale mesh VPN deployed across all lab nodes; enables secure SSH and web UI access from any device without exposing services to the public internet.
- Docker + Portainer deployed on Debian CT; Kali Linux container operational for offensive testing.
- Home Assistant OS for IoT device inventory, automation, and home network device management.
- Immich self-hosted image server (Google Photos alternative) with phone app backup and sync.
- Cisco switch + Nighthawk router network with physical and virtual segmentation (vmlr bridges).

Security Projects:

- **Deployed Metasploitable 2 on an isolated VLAN (192.168.100.x). Ran Nmap discovery and full port scans from a Kali instance. Deployed OpenVAS via Debian CT. Executed exploits via MSFConsole, obtained shell access, and documented findings in a formal pentest report (Executive Summary, CVE table, Remediation).** Vulnerability Assessment Lab:
- **Deployed Wazuh and Splunk Enterprise across the lab environment. Configured Splunk Universal Forwarders on Ubuntu servers and Windows Server 2022. Ingested Pi-hole DNS query logs as a network-wide visibility source. Built SPL detection rules for SSH brute force (failed login threshold) and suspicious DNS queries. Simulated Hydra SSH brute force from Kali and confirmed alert firing end-to-end. SOC / SIEM Lab (Capstone):**
- **Deployed SET (Social Engineering Toolkit) in Kali on an isolated bridge. Cloned a login page, executed credential capture against a Windows 10 victim VM, and captured credentials in Wireshark (HTTP POST filter). Documented attack methodology, real-world phishing clone analysis, and defensive countermeasures.** Credential Harvesting Lab:
- **Built a Python keylogger (pynput) with session headers, special key handling, and simulated SMTP exfiltration via MailHog in Docker. Tested against Windows Defender on Windows Server 2022 VM — detected in all instances. Documented detection findings, Defender behavior, and VM snapshot rollback procedure.** Keylogger Detection Lab:
- **Authored a full IR playbook referencing real lab assets (Ubuntu servers, Windows Server 2022, Pi-hole, Tailscale). Includes severity scale with lab-specific examples, log source mapping, containment procedures per system, escalation criteria, and post-incident report template.** Incident Response Playbook:
- **Python script using HavelBeenPwned v3 API and SHA-1 k-anonymity password checking. Supports bulk email input with rate limiting, CSV output, risk rating, and username search via WhatsMyName dataset.** Breach Exposure Checker:
- **Built a 20–30 slide training deck with speaker notes, scenario-based quiz (Google Forms, 80% pass threshold), and supplemental handouts including a home network security guide referencing Pi-hole and Tailscale.** Security Awareness Module:
- **Deployed Ollama on Ubuntu Server with a security-focused system prompt. Integrated Open WebUI via Docker; accessible from any device on the Tailscale mesh. Used for log analysis, CVE research, and incident report drafting.** Local AI Assistant:
- **Authored a complete public-facing guide covering the 3-2-1 backup rule, three-tier backup strategy (MIN/MID/MAX), Bitwarden password manager deep-dive, VeraCrypt encrypted backups, and emergency recovery checklists. Published to GitHub (average-user-backup-guide). Personal Data Disaster Recovery Guide (Published):**

KEY ACCOMPLISHMENTS

- Identified, investigated, and fully documented a data exfiltration case involving an executive; testified in court proceedings as an expert witness on digital forensics, security posture, and data handling practices. Expert Witness Testimony:
- Independently designed and deployed a Google Gemini + Sheets workflow that auto-generated multi-page narrative insurance reports from structured data, significantly reducing staff workload — with no budget and no prior AI development experience. AI-Powered Reporting System:
- Engineered a Google Takeout-based account preservation and data migration process to meet legal hold requirements without Google Vault, demonstrating compliance-aware resourcefulness under resource constraints. Zero-Budget eDiscovery Solution:
- Built and operated a complete security program as a solo practitioner: phishing simulations, EDR, access reviews, IR plans with live testing, SOC 2/HIPAA compliance, audit management, and a full policy library — all from scratch. Full Security Program (Solo):
- Deployed Wazuh and Splunk SIEMs in a multi-node home lab ingesting real log sources including Pi-hole DNS logs, Ubuntu auth logs, Windows Event Logs, and Tailscale audit events — an uncommon feature even in professional lab portfolios. SOC Build with Real Log Sources:
- Sole administrator and contract manager for 15+ SaaS and technology platforms, negotiating rates, managing renewals, and evaluating new solutions across the full technology stack. 15-Platform Vendor Portfolio:

TECHNICAL ENVIRONMENT — PLATFORMS & TOOLS

- ▶ Google Workspace (Admin, Apps Script, eDiscovery alt.)
- ▶ Okta (User Access & Tier 1 Support)
- ▶ Proxmox VE 9.2 (Multi-node hypervisor)
- ▶ Wazuh SIEM, Splunk Enterprise
- ▶ Pi-hole, Tailscale, Home Assistant
- ▶ SpamTitan, SPF/DKIM/DMARC
- ▶ Ubuntu, Debian, Kali, Parrot, Arch, Mint
- ▶ SSH (hardened), UFW, VLANs, Linux Bridges
- ▶ Nextiva VoIP, RingCentral
- ▶ Verisk ClaimSearch, FileTrac, ProfileGorilla
- ▶ PostgreSQL, SQLite, MySQL, MariaDB, MongoDB
- ▶ Python, PowerShell, Bash, Batch, Apps Script
- ▶ FileZilla, SFTP, Task Scheduler
- ▶ VeraCrypt, HavelBeenPwned API, Wireshark
- ▶ GoDaddy DNS, WordPress
- ▶ Hiren's Boot, ESD, PhotoRec, TestDisk
- ▶ MS365, SharePoint, Azure AD (working knowledge)
- ▶ Active Directory, Windows Server 2012–2022
- ▶ Docker, Portainer, LXC Containers
- ▶ Kali Linux, Metasploit, MSFConsole, Nmap, OpenVAS
- ▶ SonicWall Firewall, Cisco Switch, Nighthawk Router
- ▶ Windows Defender, CrowdStrike (prior use)
- ▶ Windows XP/7/8/10/11, Windows Server 2022
- ▶ SET (Social Engineering Toolkit), MailHog, Hydra
- ▶ ClaimPilot (SME), HubSpot, ClickUp, Freshdesk
- ▶ Bitwarden, LastPass, KeePass
- ▶ Crystal Reports, Power BI, Google Looker Studio
- ▶ HTML, CSS, JavaScript, Java
- ▶ Ollama, Open WebUI, Google Gemini
- ▶ Soda (Data Quality), Excel, Google Sheets
- ▶ Dropbox (Admin), Box, OneDrive, SharePoint
- ▶ Tableau (limited), Google Looker Studio

CERTIFICATIONS

ISC2 Certified in Cybersecurity (CC)	2024
Google Cybersecurity Certificate	2024
Google IT Support Professional Certificate	2024
Ethical Hacking Certificate	2024
